WAS THE AUTOMOTIVE ERA A TERRIBLE MISTAKE?

For a century, we've loved our cars. They haven't loved us back.

By Nathan Heller July 22, 2019

"It is natural to think of innovation as a march of technical advances, each one finally paying the balance on a dream sold long before: the wheel, the cart, the carriage, the car. But the truth is that our technical capacities arrive too soon; from the imperial galleon to the atom bomb, it is hard to argue that the tools have struggled to keep up with us. A smarter futurism would focus less on pushing through advances and more on being sure we will use them wisely when they come."
